

Vineeth Reddy Yadanaparthi

Software Engineer | Java | Spring Boot | React | Microservices

yadanaparthivineethreddy@gmail.com | linkedin.com/in/vineeth-reddy-y | 7036546590

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience designing, developing, and maintaining scalable enterprise applications using Java, Spring Boot, React, and Microservices architecture. Experienced in developing RESTful APIs, distributed systems, event-driven applications, and cloud-native solutions across health-care, enterprise banking, and trading domains. Proficient in PostgreSQL, DB2, RabbitMQ, Kafka, Docker, Kubernetes, CI/CD, and modern software engineering practices with a strong focus on performance optimization, secure application development, and Agile delivery.

TECHNICAL SKILLS

Languages:	Java, JavaScript, TypeScript, SQL
Backend:	Java 21, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, Microservices, Resilience4j
Frontend:	React, HTML5, CSS3
Messaging:	Apache Kafka, RabbitMQ, Google Pub/Sub
Databases:	PostgreSQL, AlloyDB, MySQL, DB2, MongoDB, Elasticsearch
Cloud & DevOps:	Docker, Kubernetes, GKE, Azure, Jenkins, GitHub Actions, CI/CD
Build	Maven, Gradle
Tools:	
API:	OpenAPI / Swagger, Postman
DB Migration:	Flyway
Auth:	Okta, JWT, OAuth 2.0, Spring Security
Monitoring:	Prometheus, Grafana, Micrometer, OpenTelemetry
Testing:	JUnit, Mockito, Integration Testing
Tools:	Git, Camunda BPM

PROFESSIONAL EXPERIENCE

Consultant <i>KPMG</i> <i>Healthcare Domain</i>	April 2026 – Present <i>Bangalore, India</i>
--	--

- Developed healthcare microservices using **Java 21** and **Spring Boot**, contributing to modular service design and enterprise application development.
- Built secure REST APIs for healthcare data exchange using **Spring Boot** and implemented authentication and authorization using **Okta**.
- Worked with **Google Pub/Sub** to publish and consume messages in an event-driven microservices architecture.
- Developed SQL queries and worked with **AlloyDB** (PostgreSQL compatible) to manage healthcare application data.
- Assisted in creating **Docker** images and gained hands-on experience with deployments on **Google Kubernetes Engine (GKE)**.
- Supported CI/CD pipelines using **GitHub Actions** and **Gradle** for build automation and application deployment.

- Investigated production issues, performed root cause analysis, and resolved application defects in a regulated healthcare environment.
- Participated in Agile ceremonies and delivered assigned features with end-to-end ownership.

Associate Consultant

*Infosys
Enterprise Banking Platform*

August 2024 – April 2026

Bangalore, India

- Built and maintained enterprise banking microservices using **Java 21** and **Spring Boot**.
- Developed event-driven workflows using **RabbitMQ** for asynchronous communication between services.
- Built responsive React applications for workflow processing and operational management.
- Optimized **DB2** queries and Hibernate mappings to improve application performance.
- Implemented **Resilience4j** circuit breakers, retries, and timeout mechanisms for fault tolerance.
- Assisted with Docker containerization and Kubernetes deployments.
- Monitored applications using Prometheus and Grafana dashboards.
- Provided L3 production support by troubleshooting critical production incidents and implementing permanent fixes.

Java Full Stack Developer

*DBQ Technologies
Trading Platform*

October 2021 – June 2024

Hyderabad, India

- Designed and implemented a high-performance trading platform backend using **Java** and **Spring Boot**, processing real-time market data feeds with low-latency REST APIs.
- Integrated **Apache Kafka** as the messaging backbone for real-time trade event streaming, enabling reliable, ordered, and fault-tolerant event processing across trading services.
- Developed automated trading workflows and approval pipelines using **Camunda BPM**, reducing manual intervention and accelerating trade settlement turnaround.
- Implemented secure user authentication and authorization using **JWT** tokens and **Spring Security**, protecting sensitive trading endpoints from unauthorized access.
- Built dynamic charting and data visualization components in **React** integrated with TradingView Charts, providing traders with real-time candlestick, volume, and indicator views.
- Designed normalized **PostgreSQL** database schemas and optimized SQL queries for trade records, portfolio management, and audit logging, improving data retrieval and transactional performance.
- Gained hands-on exposure to **Docker** by containerizing services locally and assisted in deploying builds to cloud infrastructure following team-defined deployment scripts and procedures.
- Collaborated with product managers and UI/UX designers in **Agile** iterations to define acceptance criteria, refine backlog stories, and deliver trading features on schedule.

Software Engineering Intern

DBQ Technologies

April 2021 – September 2021

Hyderabad, India

- Assisted senior engineers in developing **Spring Boot** REST API modules, gaining hands-on experience with backend development, dependency injection, and API testing using Postman.
- Contributed to front-end feature development using **React**, implementing reusable UI components and integrating them with backend APIs via Axios.
- Participated in daily **Agile** stand-ups, wrote unit tests with **JUnit** and **Mockito**, and used **Git** for version control and collaborative code management.

PROJECTS

Healthcare Platform Migration *Java 21, Spring Boot, Microservices, REST APIs, AlloyDB, Google Pub/Sub, Okta, GKE, Docker*

- Contributed to the migration of a large-scale enterprise healthcare platform from **C#/.NET** to **Java**

21 and **Spring Boot**, re-implementing core business logic and service layers while preserving existing functionality and data contracts.

- Helped redesign legacy monolithic modules into **Microservices**, integrating **Google Pub/Sub** for asynchronous inter-service communication and **Okta** for secure identity management, with data persisted in **AlloyDB**.

Enterprise Collateral Management Platform *Java, Spring Boot, Microservices, React, RabbitMQ, REST APIs*

- Developed a distributed collateral management system using **Java**, **Spring Boot**, and **Microservices**, enabling real-time collateral valuation and allocation across multiple asset classes.
- Integrated **RabbitMQ** for asynchronous event propagation between collateral, risk, and reporting services, and built a **React** front-end dashboard for portfolio monitoring via secure **REST APIs**.

Trading Automation Platform *Java, Spring Boot, Kafka, Camunda BPM, React, TradingView*

- Built an end-to-end trading automation platform leveraging **Apache Kafka** for real-time trade event streaming and **Camunda BPM** for orchestrating multi-step order lifecycle workflows.
- Delivered an interactive **React** trading interface with TradingView chart integration, connected to **Spring Boot** microservices, enabling strategy backtesting and live order execution.

Digital Incentives and Compliance Platform *Spring Boot, REST APIs, Identity Verification, Compliance*

- Designed a digital incentives platform using **Spring Boot** and **REST APIs**, incorporating identity verification workflows and compliance rule engines to ensure regulatory adherence.
- Implemented audit trail logging, role-based access control with **Spring Security**, and end-to-end validation pipelines that reduced compliance processing time by 20%.

EDUCATION

Bachelor of Engineering – Mechanical Engineering
Vel Tech Multi Tech Engineering College

2017 – 2021
